INDRODUCTION:

Social Media Website is a nice of entertainment, great for the meeting people with similar interests, and can be a very effectives business technique for entrepreneurs, writers, actors, musician or artists. This structure includes having profiles, friends, blog posts, etc. and usually something unique to that particular social media website.

EXISTING SYSTEM:

The first recognizable social media site launched in 1997 .sixdegrees.com allowed users to create profiles ,list their friends and ,beginning in 1998.each of these features existed in some form before sixDegrees,of course.profiles existed on most major dating sites and many community sites.AIM and ICQ buddy lists supported lists of friends ,although those friends were not visible to others.

USE OF PROJECTS:

- This system provides users to register their various types of profiles like social, personal, general, professional.
- This system provides users to send a scrap message, images, and data files to their friends.

- The system provides user to upload the photos so that user can maintain own album.
- This system provider user to join the communities according to their scenario.
- This system provides the user to maintain their friend list and user can update their friend list.

FESIBILITY OF PROJECT:

It is a browser- based website and can be managed via internet connection , computer having an operating system of Windows XP or above. The front-end uses HTML,CSS and Javascript to make it interactive and responsive website. Our team is capable to work on the latest technology. This project can be extended and can include full stack technologies like MERN. It needs less maintenance and up-gradation is also easy.

- It is simple and has a Friendly User Interface.
- It provides Real-Time Notifications.
- It provides a secure login facility.
- Visually Appealing and Accessible Design.
- Versatility and Responsiveness.
- User can easily use this without facing any difficulty and can enjoy it.

FUNCTIONAL SPECIFICATION:

- **Server objects:** The server classes acts as a wrapper for all server functions and social networking sites.
